THE HOME DEPOT ADVANTAGE

 **Professional Installation Services** that consistently earn high ratings from our customers.

 **Mintz Global-Screened Installers**- Handpicked, experienced, licensed & insured local contractors.

 **Flexible Financing** - We offer financing options along with one competitive project price.

 **Reliable** - We offer high-quality systems that are covered by some of the best warranty programs in the market.

 **Project Management** - We are on the job from start to finish and available for maintenance for the life of your system.

Every Trane product is designed and tested for reliability and durability. When you own a Trane, you're getting more than reliable comfort and you're getting it year after year.

 trane.com

Nexia™ Home Intelligence helps you stay connected to your home and the people and possessions you hold dear—all from a single app.

 nexiahome.com

Comfortmaker® Heating and Cooling products are designed with homeowners in mind, offering various ENERGY STAR systems to cut your home energy bill.

 comfortmaker.com

RunTru™ by Trane offers complete, affordable systems that deliver the comfort you want at the price you need.

 runtruhvac.com

All brands carry ENERGY STAR equipment

When the Installer shows you his or her **ID Badge**, you can verify online that it's real.

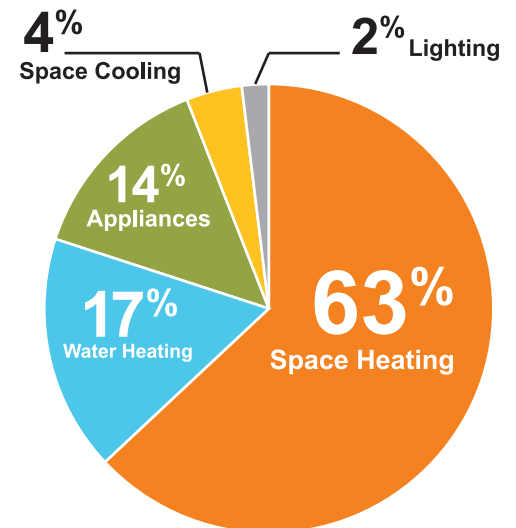

The home service industry is in part reliant on word-of-mouth referrals generated by positive customer experiences. Embedded in that is the assurance that your employees, or hired contractors, hold and maintain all necessary professional licenses and insurance, as well as delivery quality workmanship. Our modular software suite is designed to help our contractor clients manage all aspects of their work, from the tracking and maintenance of licenses, certifications, health and safety training and insurance. We help you take customer service to a whole new level, ensuring that you become the contractor of choice

THINGS TO CONSIDER

When you call to set up a FREE in-home HVAC consultation, you may expedite the process by having the answers to these questions available:

1. How much are your average monthly energy bills during the summer and during the winter?
2. Is your home humid in the summer and dry in the winter?
3. Is your current system noisy or running constantly?
4. Does your unit have a lengthy repair history?
5. Do you have any hot or cold spots in your home?
6. Is your existing system 7 years or older?
7. Do any family members have allergies?

INSTALLATION: EASY AS 1, 2, 3

- 1** Call 1-800-Home-Depot (800-466-3337) and schedule your **FREE IN HOME CONSULTATION**
- 2** Meet with your certified Home Depot consultant for a custom quotation and schedule an installation appointment
- 3** Greet the Home Depot certified installation team on the day of your scheduled installation

DID YOU KNOW?

Space heating is the biggest energy use in your home accounting for 63% of every dollar you spend.

We do it for you.
Results Guaranteed.

GAS FURNACES

Blower Speed

ECM motors are able to achieve greater efficiency in air-flow systems than a standard motor. **Variable Speed Motors** provide precise heat output rather than operating in a "high/low" setting like a multi-speed motor, and because they start off slowly and increase gradually, they generally create less noise.

Stages of Heating

Single-Stage systems operate only at full capacity. **2-Stage systems** can regulate the burner flame, allowing it to operate at a high stage and a low stage. **Modulating furnaces** go a step further, and have the ability to run at a variety of stages.

Communicating

Communicating technology allows the homeowner to connect to all of the key components so the system automatically charges, configures, and calibrates for optimal performance through the lifetime of your products.

Reliable, efficient heat when you need it

Choose a **natural gas furnace** that fits **your needs and budget**. Whether you are looking for a Variable-Speed gas furnace, Single-Stage or 2-Stage heating, **we have you covered**. Our selection of gas furnaces are guaranteed to keep your home warmer, **your bills lower**, and those winter months just a little more enjoyable.

AIR CONDITIONERS

Variable Speed Systems

Variable speed systems give you precise comfort by **only running at the speed needed** to keep your home comfortable. The compressor, outdoor fan, and indoor fan vary operating speed and BTU's to always deliver the **optimum comfort regardless of the weather outside**, slowing down or speeding up in as little as 1/10 of 1% increments to keep **comfort within 1/2°** of the thermostat setting.

SEER Rating

The **Seasonal Energy Efficiency Ratio (SEER)** is a **measurement of an air conditioner or a heat pumps cooling efficiency**. A higher SEER rating means greater energy efficiency therefore **more electricity savings** to keep your home at the **comfort level you want**.

Super Quiet Comfort

You don't need to hear it to know it's working. A Home Comfort Systems sound level is measured in decibels, the **lower the number the quieter the unit**. We've got outdoor units that run **as low as 55 dB** which is about the **same sound level as a quiet conversation**.

XV20i

TRANE XV20i

HEAT PUMPS

Variable Speed Systems

Variable speed systems give you precise comfort by **only running at the speed needed** to keep your home comfortable. The compressor, outdoor fan, and indoor fan vary operating speed and BTU's to always deliver the **optimum comfort regardless of the weather outside**, slowing down or speeding up in as little as 1/10 of 1% increments to keep **comfort within 1/2°** of the thermostat setting.

HSPF Rating

HSPF or Heating Seasonal Performance Factor is a measurement of a heat pumps **efficiency in heating mode**. When considering a heat pump for your home, **choose one with a higher HSPF to save as much as possible on your utility bills.**

How does a Heat Pump work?

Electric **air to air heat pumps** are used as a supplemental heating source to expensive fossil fuels. They extract heat from the air in cold temperatures and **can deliver more than 3 units of heat into your home while only consuming 1 unit of power.** If you are currently using oil, propane or electricity to heat your home, **ask your local heating contractor if installing a heat pump will benefit you.**

MINI & MULTI SPLIT SYSTEMS

About Ductless

Ductless heating and cooling systems are a **flexible, high-efficiency choice** for homeowners looking **for simple zoned comfort solutions**. They are a great fit **for electrically heated homes, providing even air distribution** for consistent, year-round comfort at a **fraction of the cost of baseboard heaters**.

A ductless system can be easily **installed as the primary heat source** in electrically heated homes or installed when a **room is added onto a house or an attic is converted to living space**, instead of extending the home's existing ductwork.

ENERGY STAR'S MOST EFFICIENT

All Trane split system air conditioner and heat pump matched systems with a SEER of 14.5 or above, 12 EER, or HSPF of 8.2 or above and all Trane gas furnaces with an AFUE of 90% or above meet or exceed the minimum efficiency required by the EPA for ENERGY STAR recognition. Remember that the higher the efficiency rating, the greater the energy savings. that the higher the efficiency rating, the greater the energy savings.

WHAT IS NEXIA™?

XL1050

Nexia™ Home Intelligence is a new way to run your home from wherever. It's versatile: You can do things like adjust your thermostat, schedule lights, unlock and lock the door, view live video... You can even get alerts when someone enters your house or when it's time to change your filter - and you can do it all from your smartphone, tablet, or computer.

Nexia™ is also easy to afford, use and expand: You can start with just one thermostat and add other low-cost Nexia™ compatible products throughout your home

anytime you like. You can install them yourself or, if you prefer, we're happy to install them for you.

To get you set up, we'll install the thermostat like normal. We'll also set you up with a Nexia™ Home Bridge that enables the remote control and monitoring capabilities. The new Trane 800 series thermostats are Nexia™ enabled, meaning that the Bridge™ is built right into them. All of your Nexia™ compatible products communicate wirelessly with the Bridge, and the Bridge communicates with your router.

The XL1050 ComfortLink™ II wireless thermostat control is an innovative and intuitive touch-screen product that is compatible with Trane products as well as any other brand of standard central heating and air conditioning systems.

Remote access

The XL1050 control is accessible at home or from anywhere you happen to be using an Internet-enabled computer, smartphone or tablet.

Custom control and scheduling

Bright, colorful icons guide you to every important system function with just a simple touch.

Live weather and dealer contact

The XL1050 uses your wireless network to gather and display live weather data, including forecasts, radar images and weather alerts. If your system needs routine maintenance or repair, the display will show your dealer's contact information for greater convenience.

Air quality

Reminders when your filters need to be changed and alerts when maintenance is required. The Quick Clean and Allergy Clean cycles act as a boost to your air filtration.

SCHLAGE HOME APPLIANCE OR DIMMER MODULE

Modules allow homeowners to control their lights and small appliances even when they are not there.

NEXIA HOME BRIDGE

As the system's hub, the Nexia Bridge connects all the Nexia-enabled components to the Internet.

TRANE HOME ENERGY MANAGEMENT THERMOSTAT

Compatible with all brands of central heating and cooling systems, Trane's Z-Wave thermostats enable homeowners to control, monitor and schedule energy usage from anywhere.

SCHLAGE HOME TOUCHSCREEN DEADBOLT

The strong motorized bolt automatically locks and unlocks when a user code is entered. Built-in Alarm Technology senses movement of the door and alerts homeowners with an audible alert to provide the security they expect from Schlage.

SCHLAGE HOME INDOOR AND OUTDOOR CAMERAS

FCC-certified, Schlage IP wireless color cameras allow homeowners to record, store and view video of their home—right from their smart phone or computer.

SCHLAGE HOME MOTION SENSOR AND SCHLAGE HOME DOOR/WINDOW SENSOR

Designed to detect movement at doors and windows, the sensors allow homeowners to remotely identify whether a door or window is opened or closed.

Most Internet-enabled devices can access a Nexia Home Intelligence account to control a multitude of compatible Z-Wave and Nexia components via the Nexia Home Bridge.

QUALITY ASSURANCE TO AVOID THESE COMMON PROBLEMS.

INCORRECT REFRIGERANT CHARGE

Increased failure rate and reduced moisture removal

Could add as much as 17% to operating costs

Equipment typically noisier

DUCT LEAKAGE

May **DOUBLE** the heating and cooling portion of your energy bill

Drafts and uneven temperatures

INCORRECT AIR FLOW

Could add as much as 10% to your heating & cooling operating costs

Uneven temperatures and poor moisture control in the home

Noisy grilles and registers

OVERSIZING

Doesn't run long enough to wring out moisture

Equipment is typically noisier with a shorter lifespan

The air in sunlit rooms and shaded rooms does not mix in the home

Heating and Cooling System installations require **attention to detail**, professional expertise and proper procedures.

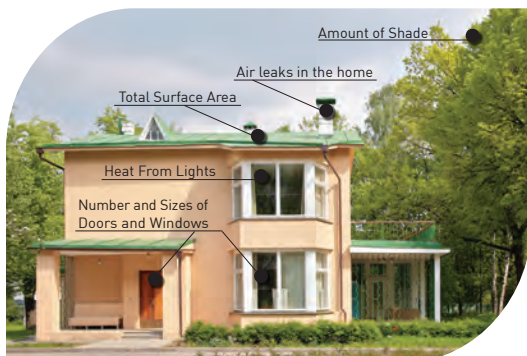

Our 101 Point Installation Checklist ensures we avoid some of the most common **energy-wasting** and **comfort-robbing problems**.

INCORRECT SYSTEM SELECTION

Reduced overall comfort in the home due to uneven temperatures

Shorter overall equipment lifespan

The proper selection of a Furnace, Air Conditioner or Heat Pump system is based on the heat gain, and/or losses from your home.

Heat gain and loss must be equally balanced by adding or removing heat to get the desired room comfort that you want. This is the **ONLY** way for them to design your new heating and cooling system to meet your needs.

Regardless of what equipment, or who you want to install your new Home Comfort System, always make sure the licensed contractor performs a proper room by room heat load/heat gain calculation.

WE'VE GOT YOU COVERED.

BEST-IN-CLASS MANUFACTURER WARRANTY AND EXTENDED WARRANTY OPTIONS

Registered Limited Warranty terms are available if the product is registered within 60 days of installation. Registration can be completed online by visiting the manufacturer's warranty page. Your home comfort consultant will be able to answer any questions you may have regarding specific products warranty coverage.

A heating and air conditioning system is a major purchase, so you'll want to make sure you fully understand the warranty before you buy. Discuss with your comfort consultant what the Manufacturer's Limited Warranty covers for the model(s) you've selected and if upgrading it with an Optional Extended Warranty is right for you. Warranties are for residential use only, some exclusions may apply.

Warranty terms vary depending on which product you own, but here is an overview of what is covered:

- Air conditioners compressor, outdoor coil, internal functional parts
- Heat pumps compressor, outdoor coil, internal functional parts
- Furnaces heat exchanger, internal functional parts
- Coils internal functional parts
- All-in-One Systems heat exchanger (where applicable), compressor, coil, internal functional parts
- Air Handlers internal functional parts
- Air Cleaners internal functional parts (excludes filters)
- Humidifiers internal functional parts
- Controls and Thermostats internal functional parts

OPTIONAL EXTENDED WARRANTY

For owners looking for a little extra security, we offer Optional Extended Warranties to give you years of protection long after your system has been installed.

FOR ALL YOUR HEATING & COOLING REPAIR NEEDS

CALL 1-800-HOME-DEPOT (1-800-466-3337)

IMPORTANT TO KNOW

Routine maintenance is required as recommended in the owner's guide to ensure proper performance of the equipment. Repairs that are required due to lack of routine maintenance are not covered by the manufacturer's Warranty Agreement.

FREQUENTLY ASKED QUESTIONS

HOW MUCH DOES IT COST FOR A NEW HVAC SYSTEM?

The cost of purchasing and installing a new heating or cooling unit will depend on a number of factors unique to your home. It's important to keep in mind as well that while a new HVAC system is a major investment, The Home Depot offers a range of financing options to make your purchase as affordable and stress-free as possible. To find out more, contact us to schedule a free consultation with a Home Depot Installer.

HOW CAN I REDUCE MY ENERGY COSTS?

Upgrading to a high-efficiency HVAC unit and a smart thermostat, installing ceiling fans and ensuring an unobstructed flow of air to rooms are all great ideas, along with regularly scheduled maintenance of your unit.

DO I NEED TO HAVE MY DUCTWORK REPLACED?

Industry experts estimate that nearly 70% of all homes with central air have poorly installed ductwork — improperly sealed or insulated, which fails to distribute hot and cold air efficiently throughout the home. Before installing a new HVAC unit, make sure our Home Depot Installer inspects your ductwork to ensure that your new efficiency gains aren't lost.

WHAT SIZED HEATING OR COOLING UNIT DO I NEED?

Bigger is not necessarily better. In fact, installing a heating or cooling system that is too large for your home can prevent it from effectively regulating both temperature and humidity. Not only does this impact negatively on home comfort, it can also cause the unit to wear out its components sooner, costing you more in both maintenance and utility bills. An HVAC Installer will determine the right size of heating or cooling unit based on the specific needs of your home.

STILL HAVE QUESTIONS?

See a store associate to help you with your HVAC buying decisions

Request a **FREE** in-home consultation with a licensed Home Depot Installer.

MY HVAC UNIT HAS STOPPED WORKING, SHOULD I REPAIR OR REPLACE IT?

If a major fix is necessary, first determine whether the non-functioning component is covered under warranty, as well as the extent of that coverage. If your HVAC system is more than 10 years old (typical product life expectancy for a furnace or A/C unit is 10-20 years), the cost of repairing or replacing a major component may not be worth it compared to investing in a new, more efficient unit.
