THE HOME DEPOT ADVANTAGE

Professional Installation Services that consistently earn high ratings from our customers.

Entuitive Compliant Installers - We provide handpicked, experienced, licensed & insured local contractors.

Flexible Financing - We offer financing options, with one competitive project price.

Reliable - We provide high-quality systems, covered by some of the best warranty programs in the market.

Project Management - We are on the job from start to finish, and remain available for maintenance during the life of your system.

TRANE[®]

It's Hard To Stop A Trane.[®]

Every Trane product is designed and tested for reliability and durability. When you own a Trane, you're getting more than reliable comfort, and you're getting it year after year.

trane.com

RunTru[™] by Trane offers complete, affordable systems that deliver the comfort you want at the price you need.

runtruhvac.com

Comfortmaker[®] Heating and Cooling products are designed with homeowners in mind, offering various ENERGY STAR systems to cut your home energy bill.

comfortmaker.com

GE APPLIANCES

GE Appliances[™] offers innovative, quality products that are made to last, seeking to provide you good things, for life.

geappliances.com

All brands carry ENERGY STAR equipment.

When the Installer shows you their **ID Badge**, you can verify online that it's real.

The home service industry is in part reliant on word-of-mouth referrals generated by positive customer experiences. Embedded in that is the assurance that your employees, or hired contractors, hold and maintain all necessary professional licenses and insurance, as well as deliver quality workmanship. Our modular software suite is designed to help our contractor clients manage all aspects of their work, from the tracking and maintenance of licenses, certifications, health and safety training, and insurance. We help you take customer service to a whole new level, ensuring that you become the contractor of choice.

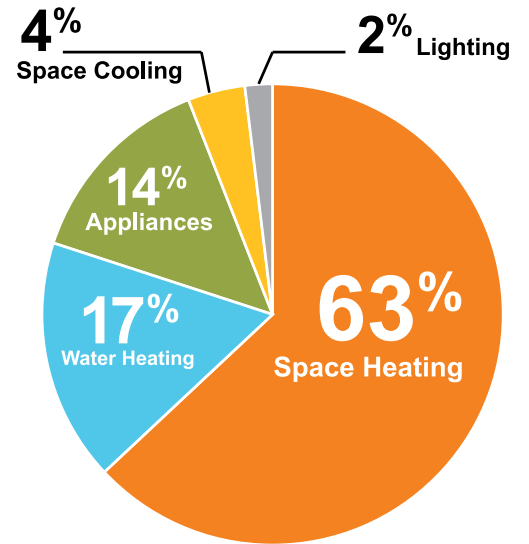

THINGS TO CONSIDER

When you call to set up a FREE in-home HVAC consultation, you may expedite the process by having the answers to these questions available:

1. How much are your average monthly energy bills during the summer and during the winter?
2. Is your home humid in the summer and dry in the winter?
3. Is your current system noisy or running constantly?
4. Does your unit have a lengthy repair history?
5. Do you have any hot or cold spots in your home?
6. Is your existing system 7 years or older?
7. Do any family members have allergies?

INSTALLATION: EASY AS 1, 2, 3

- 1 Call 1-800-HOME-DEPOT (466-3337) to schedule your FREE CONSULTATION
- 2 Meet with your certified Home Depot consultant for a custom quotation & schedule an installation appointment
- 3 Greet the certified Home Depot installation team on the day of your scheduled installation

DID YOU KNOW?

Space heating is the biggest energy use in your home, accounting for 63% of every dollar you spend.

We do it for you.
Results Guaranteed.

FREQUENTLY ASKED QUESTIONS

HOW MUCH DOES A NEW HVAC SYSTEM COST?

The cost of purchasing and installing a new heating or cooling unit will depend on a number of factors unique to your home. It's important to keep in mind as well that while a new HVAC system is a major investment, The Home Depot offers a range of financing options to make your purchase as affordable and stress-free as possible. To find out more, contact us to schedule a free consultation with a Home Depot Installer.

HOW CAN I REDUCE MY ENERGY COSTS?

Some energy-saving ideas include upgrading to a high-efficiency HVAC unit and a smart thermostat, installing ceiling fans, and ensuring an unobstructed flow of air to all rooms, along with regular maintenance of your unit.

DO I NEED TO HAVE MY DUCTWORK REPLACED?

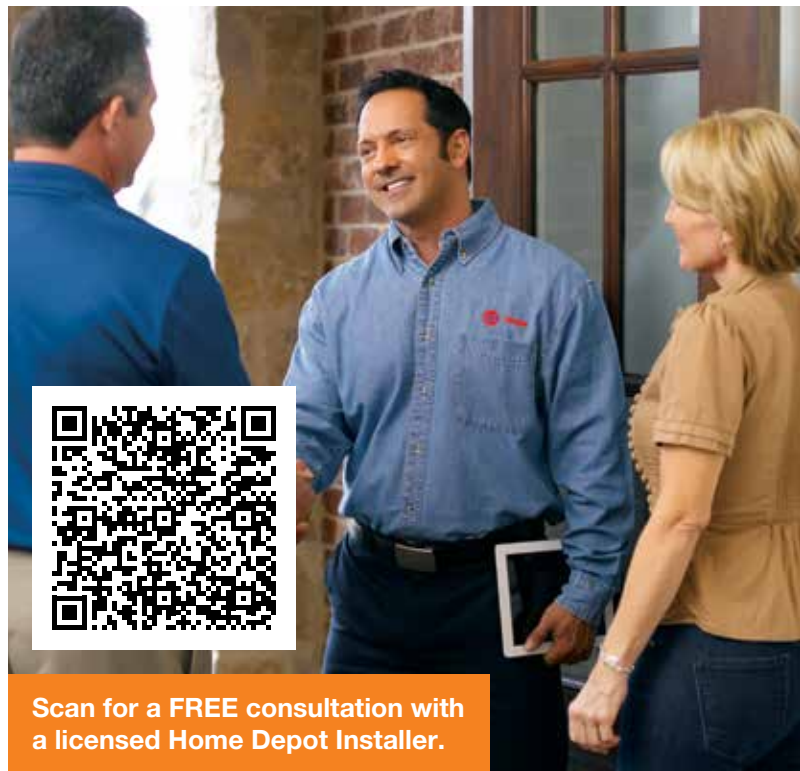

Industry experts estimate that nearly 70% of all homes with central air have poorly installed ductwork — improperly sealed or insulated, which fails to distribute hot and cold air efficiently throughout the home. Before installing a new HVAC unit, make sure our Home Depot Installer inspects your ductwork to ensure that your new efficiency benefits aren't lost.

WHAT HEATING/COOLING UNIT SIZE DO I NEED?

Bigger is not necessarily better. In fact, installing a heating or cooling system that is too large for your home can prevent it from effectively regulating both temperature & humidity. Not only does this negatively impact your home comfort, it can also wear out the unit's components sooner, costing you more in both maintenance & utility bills. An HVAC Installer will determine the right size of heating or cooling unit based on the specific needs of your home.

STILL HAVE QUESTIONS?

See a store associate to help you with your HVAC buying decisions.

Scan for a **FREE** consultation with a licensed Home Depot Installer.

MY HVAC UNIT STOPPED WORKING, SHOULD I REPAIR OR REPLACE IT?

If a major fix is necessary, first determine whether the non-functioning component is covered under warranty, as well as the extent of that coverage. If your HVAC system is more than 10 years old (typical product life expectancy for a furnace or A/C unit is 10-20 years), the cost of repairing or replacing a major component may not be worth it compared to investing in a new, more efficient unit.

QUALITY ASSURANCE

See what you can do in order to avoid these common, and costly, problems.

1. INCORRECT REFRIGERANT CHARGE

- Increased failure rate
- Reduced moisture removal
- Equipment is typically noisier
- Can add as much as 17% to operating costs

4. OVERSIZING

- Won't run long enough to wring out moisture
- Equipment is typically noisier
- Equipment will have shorter/reduced lifespan
- The air in sunlit rooms & shaded rooms do not mix within the home

2. INCORRECT AIR FLOW

- Can add as much as 10% to operating costs
- Noisy grilles and registers
- Uneven temperatures/poor moisture control

5. DUCT LEAKAGE

- Can double the heating & cooling portion of your energy bill
- Causes drafts & uneven temperatures

3. INCORRECT SYSTEM SELECTION

- Reduced overall comfort in the home due to uneven temperatures
- Equipment will have shorter/reduced lifespan

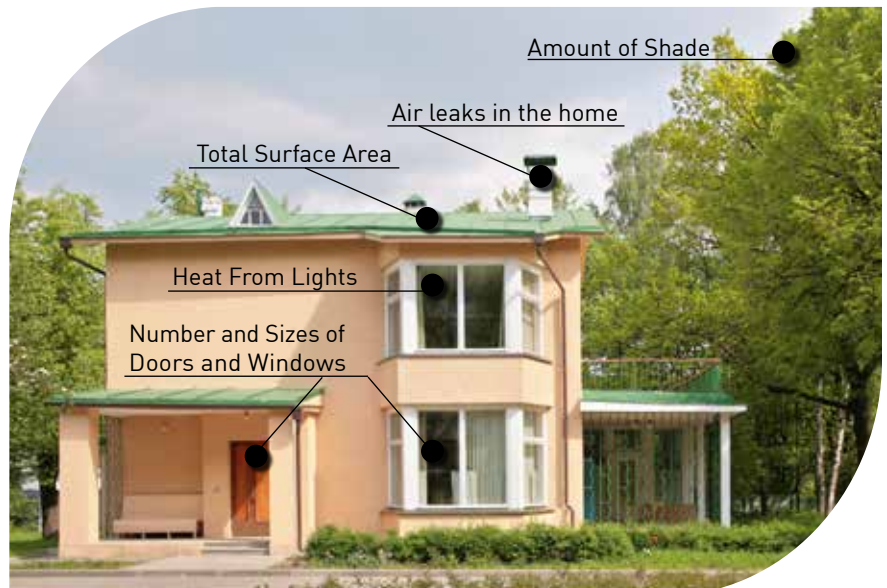

Heating & Cooling System installations require attention to detail, professional expertise, and proper procedures. Our **21-Point Installation Checklist** ensures we avoid some of the most common energy-wasting and comfort-robbing problems.

The proper selection of a Furnace, Air Conditioner or Heat Pump system for your home is based on the heat gain/losses from your home.

Heat gain & loss must be equally balanced by adding or removing heat to get the desired room comfort you want; this is the only way that professionals can design your new heating/cooling system to meet your needs.

Regardless of what equipment you use, or who you want to install your new Home Comfort System, always make sure the licensed contractor performs a proper room-by-room heat load and heat gain calculation.

SIDE DISCHARGE HEAT PUMPS & AIR CONDITIONERS

If you're aiming for high performance, efficiency, flexibility, and quiet systems for your home, the Trane Resolute and GE Connect Series systems will serve to provide year-round comfort.

HEAT PUMPS

How does a Heat Pump work?

Electric air heat pumps are a supplemental heating source that serve as an efficient alternative to expensive fossil fuels. It extracts heat from the air to either warm or cool your home during seasonal temperatures. This process **can deliver more than 3 units of heat into or out of your home – while only consuming 1 unit of power.** If you are currently using oil, propane or electricity to heat your home, **ask your local heating contractor** if installing a heat pump will benefit you.

AIR CONDITIONERS

What is a SEER Rating?

The **Seasonal Energy Efficiency Ratio (SEER)** is a **measurement of an air conditioner's or a heat pump's cooling efficiency**. A higher SEER rating means greater energy efficiency, therefore **more electricity savings** to keep your home at the **comfort level you want**.

TRANE S9V2

Up to 96% AFUE

2 Stage Heating, Variable Speed Blower with Comfort-R™ for increased dehumidification

Lifetime limited Warranty on heat exchanger, 10YR limited on internal functional parts.

Please note: Photos attached may differ from how the product model appears in real life.

Why is AFUE important?

Annual Fuel Utilization Efficiency (AFUE) measures **how efficiently a furnace converts fuel into heat** for your home. **The higher the AFUE rating, the more energy-efficient the system** and the more heat entering your home. As a homeowner, you may want a high AFUE-rated furnace because it's a good thing for the environment, your home, and your wallet.

DUCTLESS HEAT PUMPS & COOLING SYSTEMS

About Ductless

Ductless heating and cooling systems are a **flexible, high-efficiency choice** for homeowners looking for **simple, zoned comfort solutions**. They are a great fit for **electrically heated homes, providing even air distribution** for consistent, year-round comfort at a **fraction of the cost of baseboard heaters**. A ductless system can be easily **installed as the primary heat source** in electrically heated homes, or installed when a **room is added onto a house or an attic is converted to living space**. This is a great alternative rather than having to extend the home's existing ductwork.

About Multi-Zone Systems

Control your comfort in multiple rooms, or your entire home, with mini-split heating and cooling systems. Set a unique temperature in each space to make your home an oasis, all without the use of ductwork.

HOW DUCTLESS SYSTEMS WORK

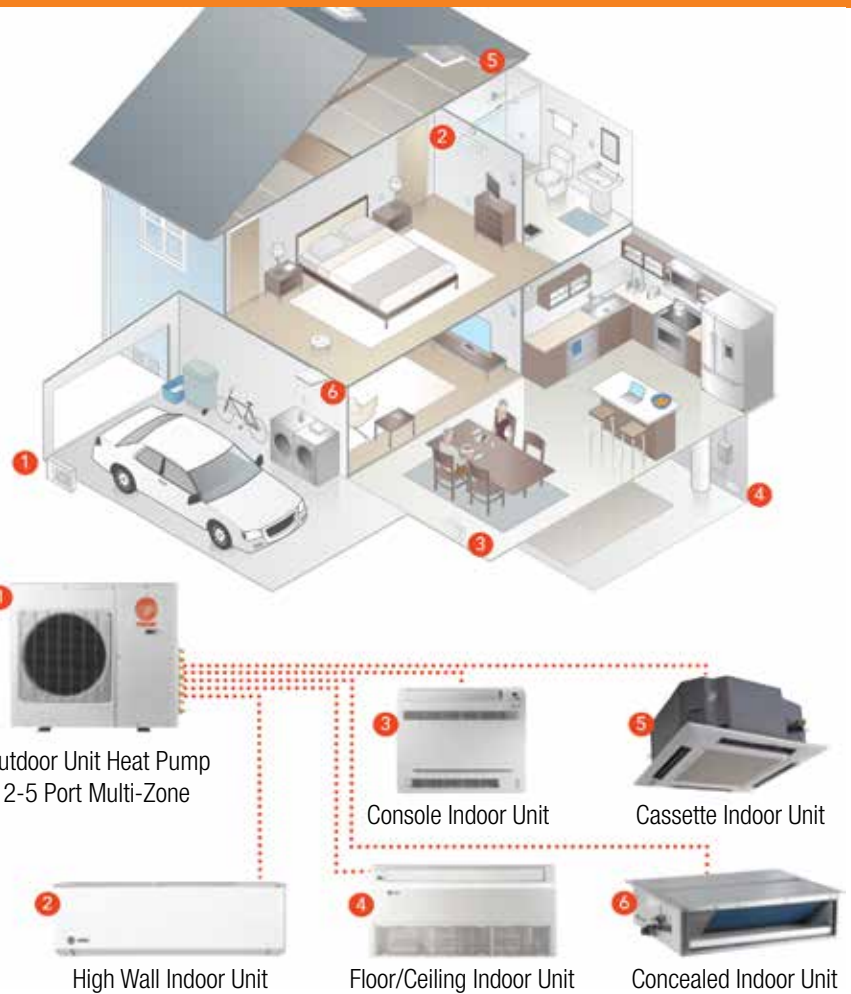

Efficient comfort, where & when you need it

Trane ductless systems allow you to create a comfortable indoor environment in spaces where adding ductwork might be impractical, inefficient, or too expensive. Single-zone systems control temperatures in one room, while each multi-zone system handles up to 5 rooms.

Control your comfort with ease.

To communicate with and customize your ductless system, Trane offers control options that suit your needs and lifestyle. Whether you opt for a Smart or Traditional thermostat, there are many controls that help optimize your home's temperatures through scheduled programming. When you opt for the Smart Thermostats, this comes with the additional feature of controlling your home's temperature no matter where you are, via the Trane Home app.

Learn more about Trane Home app on Page 14.

WIRELESS REMOTE CONTROL

This versatile, handheld remote control is compatible with Trane mini-split & multi-split ductless systems.

PROGRAMMABLE CONTROLLER

Save your temperature settings with seven-day programmable capabilities, all on an easy-to-read, wall-mounted display.

WIRED CONTROLLER

This wall-mounted controller is included with floor, ceiling, cassette, concealed, and Pro-Series units.

INDOOR AIR QUALITY

Setting the standard in air quality, the **Trane CleanEffects™ Air Cleaner** uses revolutionary technology that supplies your home with a cleaner, healthier environment, starting with **removing up to 99.98% of airborne particles within the air.** Say goodbye to harmful bacteria and allergens.

Introducing Trane Home App

Enjoy next-level comfort and control with the Trane Home app. Connect your smart comfort system to the app so you can adjust your temperature, set your schedule and monitor your HVAC usage from virtually anywhere.

The XL1050 ComfortLink™ II wireless thermostat control is an innovative and intuitive touch-screen product that is compatible with Trane products as well as any other brand of standard central heating and air conditioning systems.

Remote Access

The XL1050 control is accessible at home or from anywhere you happen to be using an Internet-enabled computer, smartphone or tablet.

Custom Control & Scheduling

Bright, colorful icons guide you to every important system function with just a simple touch.

Live Weather & Dealer Contact

The XL1050 uses your wireless network to gather and display live weather data, including forecasts, radar images and weather alerts. If your system needs routine maintenance or repair, the display will show your dealer's contact information for greater convenience.

Air Quality

Reminders when your filters need to be changed and alerts when maintenance is required. The Quick Clean and Allergy Clean cycles act as a boost to your air filtration.

GO DEEPER WITH DIAGNOSTICS

Share details about the health of your system with your dealer, so they can help detect potential problems before they become emergencies.

Keep it cool (or hot, whichever you prefer)

Use the Trane Home app to take instant control over how your home feels. Create your ideal temp and keep things as cool or cozy as you like.

Speak up, and tell your thermostat what to do

Connect with Alexa® or Google Home® to control your home's temperature just by talking! Speak your command in order to manage your thermostat and other connected devices, like your lights & speakers.

Save at home and in your bank account

Schedule when and how your system should run so it performs at its best and costs you less in utility bills.

Download Today

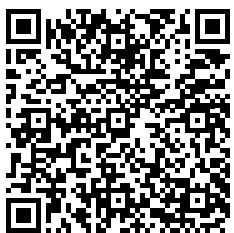

Scan the QR Code on your phone to download the Trane Home App and take control of your HVAC system today.

PAY IN STORE USING YOUR SMARTPHONE

FINANCE YOUR HEATING & COOLING SOLUTION IN MINUTES.

*On approved credit by Financeit Canada Inc. as agent for a third-party financial institution. No downpayment. Interest only payments required during the 6-month Shopping Period. The billing account period covered by each account statement will be approximately 28 to 31 days. No grace period applies. After the Shopping Period, the total amount outstanding by the borrower will convert to a term loan at a fixed credit rate/APR of 13.99% with fixed monthly payments divided over (i) a 60 month term where the minimum spend is over \$1,000, or (ii) 12 months with a spend of \$999.99 or less. No downpayment required and no credit charges apply. A loan of \$50,000 incurs \$9,389 in interest and credit charges over 60 months for a total obligation of \$59,389. See store associate or homedepot.ca/projectloan for details.
